

Irrigation Bulb

Intended Use:

Intended for the controlled and selective infusion and irrigation during endoscopic urology procedures

Key Features and Benefits:

- Improved visualization with transparent device design
- Bulb compresses in various hand-held positions and fits easily in one hand
- Continuous flow and pulsatile action with minimal tubing
- Accurate delivery of bolus irrigation
- Can be controlled by physician or assistant
- Easy movement of scope even with bulb attached
- Compatible with all types of scopes
- Less cumbersome than syringe administration
